

CERTIFIED QUALITY

Manufacturer and product approvals

When it comes to its areas of utilization, the KLINGER KVN piston valve leaves no questions unanswered. This is confirmed by a wide range of tests and certifications, meaning plant operators can rely on absolute operational safety and a guaranteed tightness of seals.

» **Fire-Safe**

The Fire Safe test in accordance with the API standard and DIN EN ISO 10497 has been certified by Lloyd's Register and the TÜV Austria respectively.

» **Valve for oxygen service**

The BAM Berlin confirms the resistance to internal burnout under the influence of oxygen pressure surges. This refers to utilizing the KVN piston valve at up to 40 bar and operating temperatures of up to 60 °C.

» **Valve on the basis of "TA Luft"**

The requirements of the "TA Luft" regarding the permissible leakage rates at the spindle passage have been fulfilled.

» **Emission testing**

The ISO 15848 and VDI 2440 emission tests for KLINGER KVN piston valves at ≥ 250 °C have been certified by the TÜV Austria.

KVN DN 15-50

Flange design

GENERAL FEATURES

- » Straight-through piston valve
- » Sealing via two elastic KX-GT valve rings
- » Excellent control characteristics
- » Fire Safe
- » Special regulating design available (KVRKN)

CONNECTIONS

Flange in accordance with EN 1092-2 (Mat. code III, VI)
Flange in accordance with EN 1092-1 (Mat. code VIII, Xc)

DIMENSIONS

EN 558-1, GR. 1

ACCEPTANCE TESTING

- » Seat leak tightness: EN 12266-1 P12, leakage rate A
- » Tightness to atmosphere: EN 12266-1 P11
- » Strength: EN 12266-1 P10

TEMPERATURE

-10 °C to +400 °C (see P-T diagram)

KVN FLANGE DESIGN DN 15-50

MATERIAL

- » Grey cast iron EN-GJL-250 / 5.1301 (Material code III)
- » Nodular cast iron JS 1049 / 5.3103 (Material code VI)*
- » Cast steel 1.0619 (Material code VIII)
- » Stainless steel 1.4581 (Material code Xc)

* refers to body, upper parts consist of VIII

AREAS OF UTILIZATION

Pressure and temperature diagrams

The pressure and temperature diagrams show the influence of the body and sealing materials on the area of utilization of the piston valve. Insert the operating levels into the diagram fields to identify whether the safety reserves meet your requirements.

DIN STANDARDS

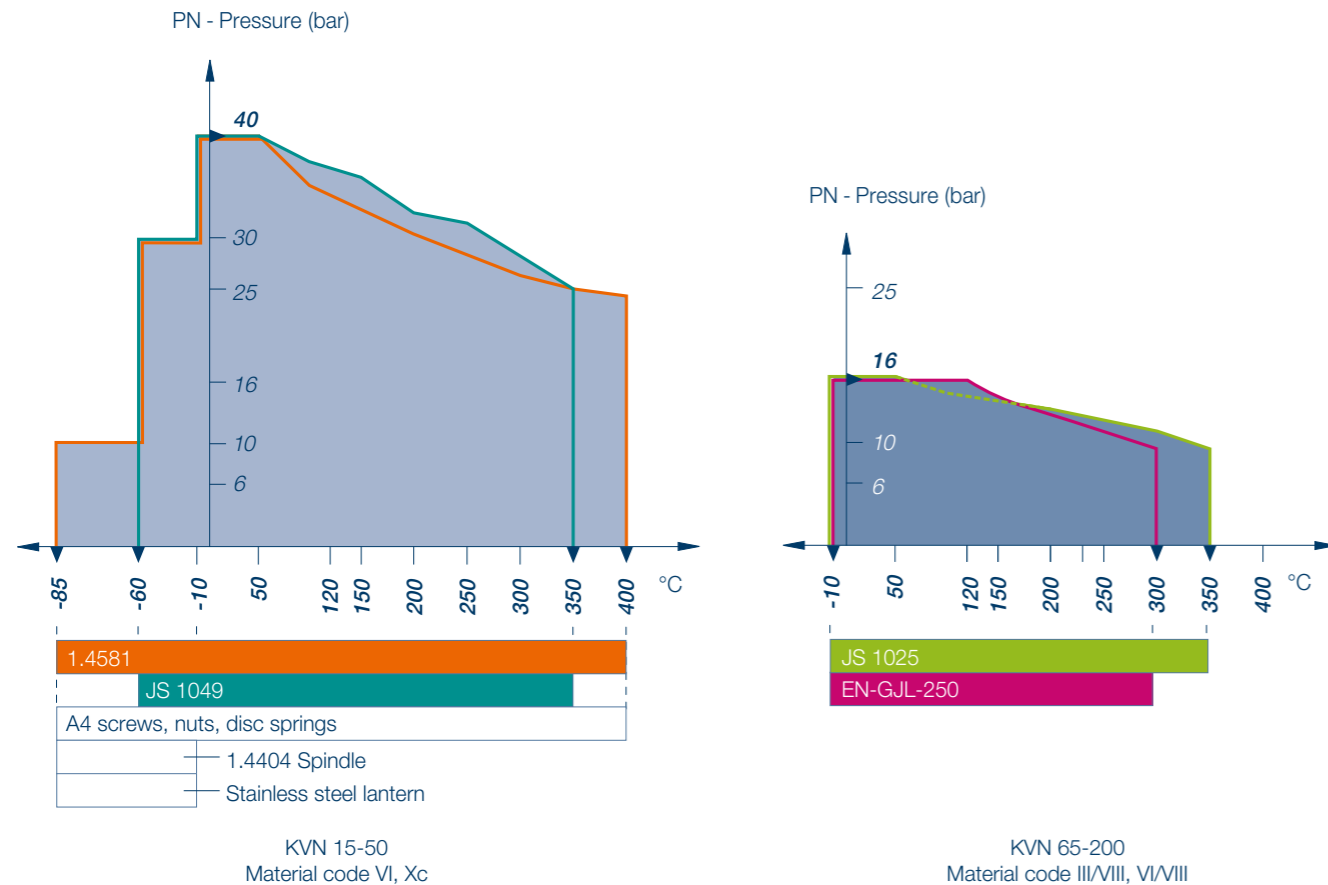

Materials:

- Grey cast iron EN-GJL-250 / 5.1301 (Material code III)
- Nodular cast iron JS 1025 / 5.3103 (Material code VI)
- Cast steel 1.0619 (Material code VIII)
- Nodular cast iron JS 1049 / 5.3103 (Material code VI)
- Stainless steel 1.4581 (Material code Xc)

Pressure ratings:

- PN 63
- PN 40
- PN 16

Pressure-Temperature diagrams
The Pressure-Temperature diagrams allow you to select the most economically feasible KLINGER KVN piston valve.

ASME STANDARDS

Materials:

- Cast steel A-216 WCB (Material code VIII)

Pressure ratings:

- PN Class 300
- PN Class 150

TECHNICAL DETAILS

Actuator design

KLINGER KVN piston valves can be automated by means of electrical and pneumatic actuators. Multiple designs with an ISO flange can be utilized for automation by means of an electrical actuator. The pneumatic membrane actuator, on the other hand, is directly mounted and is available in a simple or double-acting design. When selecting the actuator, ensure that the actuator is specified with a torque rating corresponding to the nominal size.

Torques

Nominal size DN	Pressure differential	Torque
mm	bar	Nm
15	40	4
20	40	5
25	40	8
32	40	13
40	40	21
50	40	34
65	40	21
80	40	24
100	40	36
125	40	43
150	40	50
200	40	64

Flow values

DN (mm)	ζ	K_{vs} -values
15	4	4.5
20	4	8
25	4	12.5
32	4	20.5
40	4	32
50	4	50
65	6	69
80	6	104
100	6	163
125	7.2	233
150	7.2	335
200	7.2	582

KLINGER Fluid Control recommends the factor 1.5, i.e. using plus 50 % for standard computations.

The characteristic unit for shut-off and control valves in the metric system is the Kv-value. The values provided in the table apply to the H₂O flow medium with a temperature of 5–30 °C, a density of 1000 kg/m³ and a pressure loss of $p = 1$ bar at the valve.

In countries using inches, the characteristic unit is the Cv-value. It provides how many US gal/min of H₂O, at a temperature of 60 °F and with a pressure loss of 1 psi, flow through the valve.

Allows for the calculation of:

$$K_v = Q \cdot \sqrt{\frac{\rho}{1000 \cdot \Delta p}}$$

or

$$\zeta = \frac{2 \cdot \Delta p \cdot 10^5}{\rho \cdot w^2}$$

Flow rate
Pressure loss
Density
Velocity
Flow coefficient
Pressure loss
coefficient

Q in m³/h
 Δp in bar
 ρ in kg/m³
 w in m/s
 K_v in m³/h
 ζ

The valve is to be selected in a manner that the Kv-value is greater, or the ζ -value less than the computed value for the desired application.

KVN AUTOMATION

Optimization and precision

» KVN with mounted actuator

Available either with an electromechanical or a pneumatic actuator.

» Electromechanical actuator

Available for 400 Volt and 230 Volt respectively as well as with special voltage on demand.

» Pneumatic actuator

The pneumatic membrane actuator can be provided in a single as well as in a double-acting design and offers an OPEN/CLOSE function. The single-acting actuator is executed in a manner that allows the valve to be closed by means of spring tension and opened by means of set pressure.

Fig.: KVN with actuator
